1. Overview

1.1 Introduction

GD3200A/GD3200B is a SOC **chip with serial port control function and supports hard decoding of** MP3, WAV, WMA format. It can be connected with TF/SD card, SPI-Flash, U **disk and other storage devices, and supports** FAT, **FAT16, FAT32 file system. It can play the specified music and how to play the music through simple serial port commands, without cumbersome bottom-level operations, easy to use, stable and reliable are the biggest features of this product. In addition, the chip is also a deeply customized product, a low-cost solution specially developed for the field of fixed voice playback.**

solution, can be customized to support G726, G729, FLAC, APE, M4A, ALAC, AMR, DTS, MIDI, MTY and other audio format decoding.

1.2 Function

1. Support sampling rate (KHz): 8/11.025/12/16/22.05/24/32/44.1/48; 2. 24- bit **DAC** output , **dynamic range supports 90dB, signal-to-noise ratio supports** 85dB; **3. Fully supports FAT** , FAT16, FAT32 **file system, 4. Support** 32G TF **card, support** 32G U disk; **5. Control mode, serial port mode, AD button control mode;** 6. Radio language insertion function, **you can pause the background music being played; 7 , The audio data is sorted by folders, supports up to** 99 **folders, and** 255 **songs can be assigned to each folder;** 8. The volume can be adjusted to 30 **levels, and 6 kinds** of EQ **are optional; 9. It can be controlled and played through the serial port (Uart) music with specified filename;**

Guangzhou GuoDian Information Technology Co., Ltd.   **GD3200B/GD3202B/GD3300B Datasheet**

1.3 Electrical parameters

name	parameter
audio file format	**1. Support** MP3, WAV, WMA
	2. Sampling rate support (KHZ): 8/11.025/12/16/22.05/24/32/44.1/48 3. **Support** Normal, Jazz,
	Classic, Pop, Rock **and other sound effects**
USB **interface**	Full speed USB 2.0 OTG controller **standard**
UART **interface**	**serial port, TTL** level, baud rate 9600bps, power supply is
Input voltage	3.2V-5V, the best is 4.2V
rated current	20ma[without U **disk]**
size	**Standard** SOP16 package
Operating temperature	-40ÿ to +85ÿ
humidity	**5% ~** 95%

2. Chip Instructions
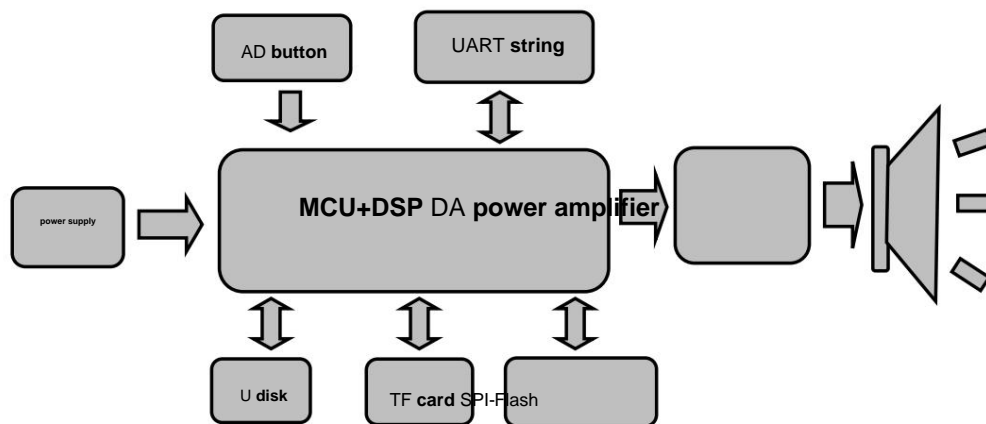

The chip uses the SOC **solution, integrates a** 32 **-bit DSP, and uses hard decoding to ensure the stability and**

sound quality of the system. The small package size better meets the needs of embedding into other products.

2.1 SPI-Flash replace voice content

Take the 16M flash **operation as an example, the specific operation is as follows.**

2.1.1 Insert the USB link to the computer
2.1.2 Format disk
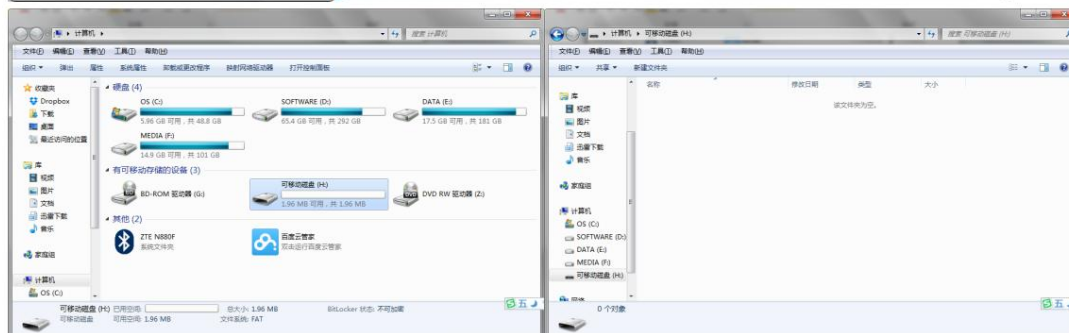

As shown in the picture, it can be used as a U **disk normally. When** the flash **is used for the first time ,** the operation of 2.1.1 is required . **After one operation, if** the flash **is not formatted or deleted later, there is no need to repeat the above operations.**

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd.
GD3200B/GD3202B/GD3300B Datasheet

2.1.3 Load voice
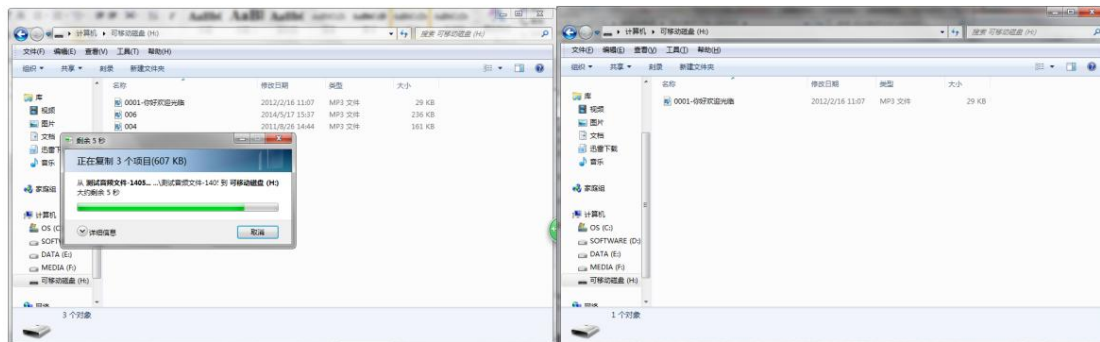

As shown in the figure above, it can be directly dragged into the voice as a U **disk. The operation** is exactly the same as SD **card and U disk.**

2.2 Chip pin description
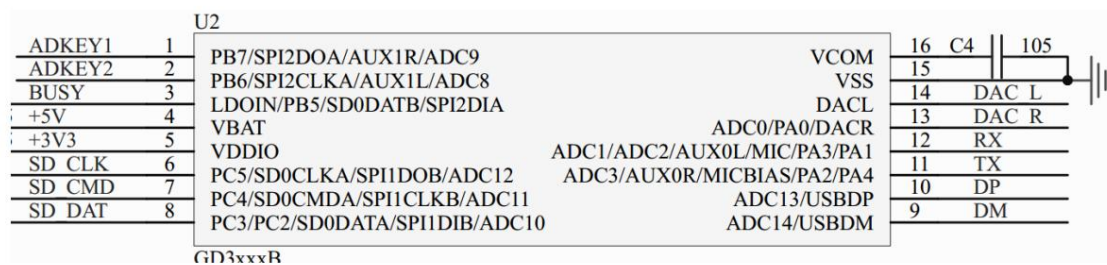

Pin No. Pin Name		Remarks on function description ADKEY2 external key	
1	ADK1	must be 22K **pull-up** ADKEY1 external key must be 22K **pull-input decoding**	
2	ADK2	**output signal** 5V **power input cannot exceed 5.2V** for 3V power SPU	
3	BUSY	24C02 power supply	
4	VDD		
5	VDDIO		
6	**SPI_DO /SD_CLK**	**SPI_DO data bus** SD_CLK **clock bus**	
7	SPI_CLK/SD_CMD	**SPI_CLK data bus** SD_CMD **command bus**	SPI-flash **and TF/SD card can only choose to connect to one device**
8	**SPI_CS / SD_DAT**	**SPI_CS chip select bus** SD_DAT **data bus**	
9	DM	USB	
10	DP	USB	
11	TX	UART **serial data output**	
12	RX	UART **serial data input audio**	Baud rate: 9600bps
13	**DAC_R**	**output right channel audio**	
14	**DAC_L**	**output left channel power**	
15	VSS	**supply ground**	
16	VCOM	**coupling pin**	

3. Description of control mode

3.1 Button interface

The chip adopts the way of AD **keys, which replaces the traditional connection method of the matrix keyboard. The advantage of doing this is to make**

full use of the increasingly powerful AD **function** of the MCU . **The chip is configured with** 2 AD ports by default, and **the resistance distribution of 20 keys. If it is**

used in the occasion of strong electromagnetic interference or strong inductive or capacitive load, please refer to the "Notes" .

AD **button resistance corresponding function reference diagram:**
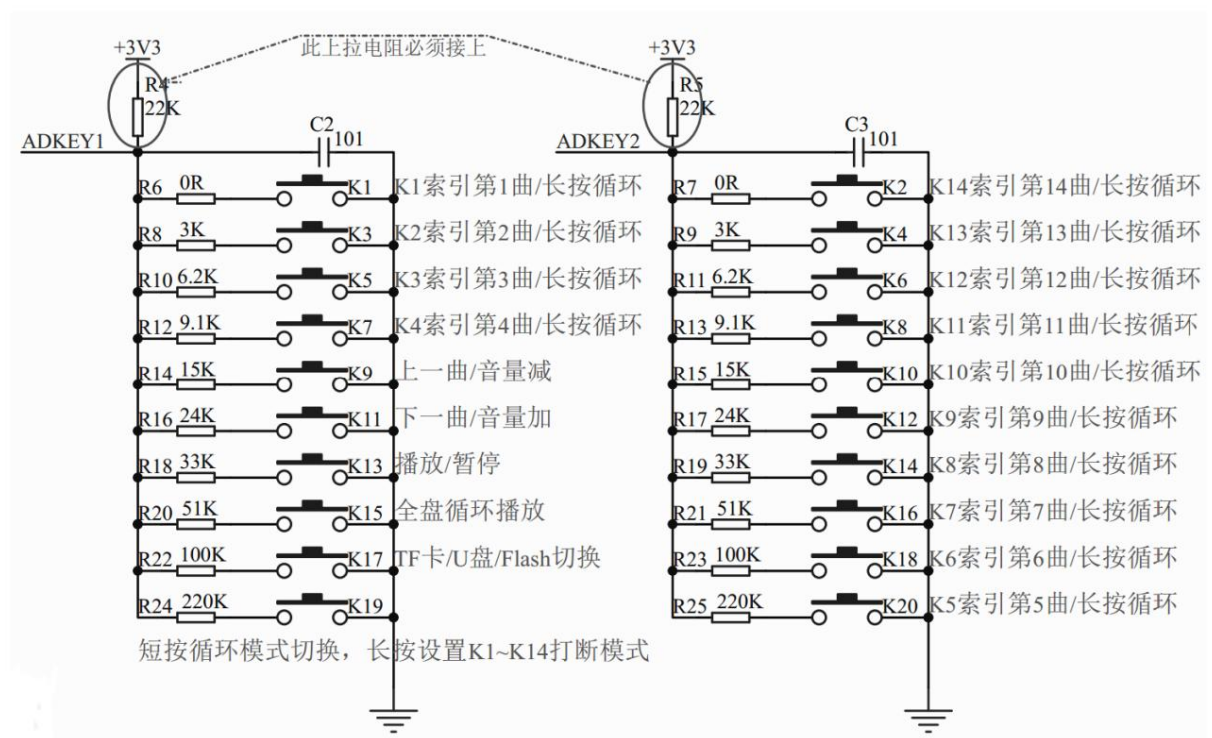

3.2 Serial communication format

Support asynchronous serial communication

mode Baud rate : 9600 bps **Parity bit : No Data**

3.4 The data returned by the chip

The chip will return data in key places for users to control the working status of the chip.

• The data that the chip is powered on and initialized successfully; •

The chip has finished playing the data of the current track; • The chip

successfully receives the ACK (response) returned by the command ;]; • When the chip is busy, if

there is data coming, the chip will return a busy command; • U disk, TF **card is inserted and pulled out, and data will be returned.**

3.4.1 The data returned by chip power-on

(1) When the chip is powered on, it takes a certain amount of time to initialize. This time depends on the number of files in the U disk, TF **card,** flash **and other devices.**

Generally, it takes 1.5~3S . **If the initialization data of the chip has not been sent out after this time, it means that the chip initialization error, please reset the power supply**

of the chip, and check the connection of the hardware. (2) The chip initialization data includes the lower four bits DL (bit0~bit3) **of the low byte of the data fetched by the online**

device , such as sending

7E FF 06 3F 00 00 01 FE BB EF; DL=0x01 indicates that only the USB disk is online **during power-on . For other** data, please refer to the following table, the relationship between each

device:　　　　　　[0x01]: U **disk online [0x02]: TF/SD card online** [0x03]: U disk, TF/SD **card online [0x04] : Flash online** [0x05]: U disk, Flash **online** 0 **[0x06]: TF/SD**

card, flash **online** 0 [0x07]: U disk, TF/SD card, flash **online** 0	Bit3(PC)	Bit2(Flash)	Bit1(SD)	Bit0(U disk) 0 0
			0	1
	0	0	1	0
	0	0	1	1
	0	1	0	0
		1	0	1
		1	1	0
		1	1	1

(3) The MCU must wait for the chip initialization command to be issued before sending the corresponding control command, otherwise the chip will not process the

command sent, and it will also affect the normal initialization of the chip.

3.4.2 The data returned after the track is played

U **disk plays the first** song	7E FF 06 3C 00 00 01 FE BE EF U **disk played the** first **song finished**	
U **disk finished playing the** 2nd song	7E FF 06 3C 00 00 02 FE BD EF U **disk played the** second **song completed**	
TF/SD **card disk has finished playing the** third **song** 7E FF 06 3D 00 00 03 FE BB EF U **disk has played the** third **song**		
TF/SD **card disk has finished playing the** fourth **song** 7E FF 06 3D 00 00 04 FE BA EF U **disk has played the** fourth **song**		
Flash **finishes playing the** 5th track	7E FF 06 3E 00 00 05 FE B8 EF U **disk played the** fifth **song**

3.5 Detailed Explanation of Serial Port Commands

3.5.1 Specify the song playback command

(1), For example, select the first song to play, the sending part of the serial port 7E 10 06 03 00 00 01 FF E6 EF 7E **--- start command**

FF---version

information **06---data length (not**

including checksum) 03---represents

command byte 00---whether a response is required [0x01: response is required, 0x00:

no response is required] 00--- The high byte [DH] of the track 01---the low byte [DL] of

the track, here represents the first song to play

FF--- high byte of checksum

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd.

GD3200B/GD3202B/GD3300B Datasheet

E6---low byte of checksum

EF---End command

(2). For the selection, if the 100th song is selected , first convert 100 **into** hexadecimal , **and the default is double-byte, which is** 0x0064. DH=0x00; DL=0x64. **(3) If you choose the 1000th** song **to play, first** convert 1000 **into** hexadecimal , **the default is double-byte, which is** 0x03E8; DH=0x03; DL=0xE8. **(4) The operation of other tracks can be deduced by analogy, because the** hexadecimal **system is the most convenient operation in the embedded field.**

3.5.2 Specify volume playback command (0x06)

(1) The default volume of our system is 30 when the system is powered on . **If you want to set the volume, just send the corresponding command directly. (2) For example, if the specified volume is** 15 , **the command sent by the serial port: 7E** FF 06 06 00 00 0F FF D5 EF.

(3), DH=0x00; DL=0x0F, 15 is converted into hexadecimal **to 0x000F. You can refer to the instructions in the Playing Tracks section.**

3.5.3 Specify the playback device (0x09)

After specifying the device. The chip will automatically enter the stop decoding state, waiting for the user to specify the track to play. from Receive the specified device to the chip to complete the initialization of the file system. It takes about 200ms. Please wait for 200ms **before sending the command for the specified track.**

Designated playback device-U disk 7E FF 06 09 00 00 01 xx xx EF xx	**xx: stands for verification**	
Designated playback device-SD disk 7E FF 06 09 00 00 02 xx xx EF **designated playback device-**		
FLASH 7E FF 06 09 00 00 04 xx xx EF		

3.5.4 Specify folder to play (0x0F)

Specify **001?.mp3 in folder** 01 **Specify**	7E FF 06 0F 00 01 01 xx xx IF	**The instruction only recognizes the first** 3 **digits, and "?" means any character.**
100?.mp3 in folder 11 7E FF 06 0F 00 0B 64 xx xx IF		
Specify **255?.mp3 in folder** 99 and specify **254?.mp3 in**	7E FF 06 0F 00 63 FF xx xx IF	
root directory FF **Note: When the folder name is "FF", it**	7E FF 06 0F 00 FF FE xx xx IF	

means playing the file name in the specified root directory. (1) The specified folder playback is an extended function developed by us. The default folder naming methods are "01" and " 11" because our chip does not support the folder name recognition of Chinese character names. For the stability of the system and the speed of song switching. By default, each folder supports a maximum of 255 **songs and a maximum** of 99 **folders. If the customer has special requirements, it needs to be classified according to the English name. We can also** achieve it, but the name It can only be composed of English names such as "GUSHI" and "ERGE". But mp3 **files need to add a prefix, which can be changed to "002 have to love.mp3" on the basis of " have to** love.mp3".

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd. **GD3200B/GD3202B/GD3300B Datasheet**

(2) For example, specify the 100xxx.MP3 file of the "01" folder , **the**

command sent by the serial port is: 7E FF 06 0F 00 01 64 xx xx EF **DH:**

represents the name of the folder, and supports 99 **files by default, namely 01--99 naming; DL:**

represents the track, the default is up to 255 **songs, that is,** 0x01~0xFF. (3) **For the**

standardization of the chip, the folder and file name must be specified at the same time to lock a file. It is

also possible to specify folders or file names separately, but the management of files will become worse.

Designated folders and designated tracks support MP3 and WAV (4). The following two screenshots illustrate

the designation of folders and file names [divided into left and right two diagrams].

3.5.5 Specify the tracks in the MP3 folder to play

Command format	7E FF 06 12 00 00 01 FE E8 EF **"MP3"** folder, the track is "0001"
	7E FF 06 12 00 0B B8 FE 26 EF **"MP3"** folder with track "1999"
	7E FF 06 12 00 FF FF FC EB EF **"MP3"** folder with track "65535"
	7E FF 06 12 00 27 10 FE B2 EF **"MP3"** folder with track "10000"

Note: When the number of files is less than 10000 , **the first** 4 **digits must be** 4 **digits, and when it exceeds**

10000 , **the first** 5 **digits must be numbers. (1) The specified file name is as shown in the right figure: (2) On**

the basis of the specified folder and file name, we expand the function of a single folder, and the name of the

folder must be "MP3". (3) A maximum of 65,536 tracks **is supported , but in view of the operating speed of the**

file system, the speed of track switching may slow down as the file size increases.
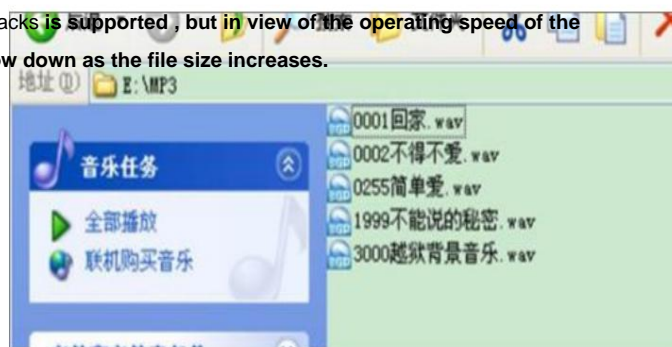

3.5.6 Insert the audio under the ADVERT folder

Command format	7E FF 06 13 00 00 01 FE E8 EF **"ADVERT"** folder, the track is "0001"
	7E FF 06 13 00 0B B8 FE 25 EF **"ADVERT"** folder with track "1999"
	7E FF 06 13 00 FF FF FC EB EF **"ADVERT"** folder with track "65535"
	7E FF 06 13 00 27 10 FE B2 EF **"ADVERT"** folder with track "10000"

Note: When the number of files is less than 10000 , **the first** 4 **digits must be** 4 **digits, and when it exceeds** 10000 ,

the first 5 **digits must be numbers.**

(1) We support the insertion of other tracks during the playback of selected songs, so that it can meet the needs of inserting advertisements during the playback of background music. (2) After sending the 0x13 command, the system will store the IDV3 information **of the currently playing track , and then play the specified intermission track. After the interrupted track is finished playing, the system will return to the saved playback breakpoint and continue playing. until the playback is complete. (3) The setting format is to create a folder named "ADVERT" in the device, and store the tracks that need to be inserted in it. When the number of tracks is** less than 10,000 , **set the track to "xxxx+track** name.MP3/WAV" , when the number of tracks is greater than 10000 , **the track is set to "xxxxx+track name.MP3/WAV",** x represents a number. **(4) If the system is currently in a pause or stop state, it will send an interrupt command, which is only used as a general play command. If in the process of inserting, you can continue to insert other tracks, but after the playback is finished, you still return to the first stored breakpoint information to continue playing. (5) The settings of the designated in-stream advertisement are as follows:**

3.5.7 Support 4095 track commands under a single folder

Command format	7E FF 06 14 00 10 FF FD D8 EF **The folder designated as "01" and the track as "0255"**
	7E FF 06 14 00 17 CF FE 01 EF **Folder designated as "01" with track "1999"**
	7E FF 06 14 00 C0 01 FE 26 EF **The folder designated as "12", the track as "0001"**
	7E FF 06 14 00 C7 CF FD 51 **The folder designated as "12" by** EF , the track as "1999" (1), **the command**

byte of the serial port is 0x14 **(2), the parameter is two bytes, designated as a folder The track named "12" is "1999?.mp3" serial port data: 7E** FF 06 14 00 C7 CF FD 51 EF , **where** 0xC7 **and** 0xCF **are parameters, and the combination is** 0xC7 **CF. A total of** 16 **bits, of which the upper** 4 bits **represent the file The name of the folder, where** C **means 12, and the lower** 12bit **means the name of the file name, where** 7CF **means** 1999, that is, the track with the file prefix "1999?.mp3". **(3) The name of the folder is as follows:**

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd. **GD3200B/GD3202B/GD3300B Datasheet**
gdkeji.cn

3.5.8 All loop play commands

Loop start 7E FF 06 11 00 00 01	xx xx EF **Loop play all tracks Loop stop** 7E FF 06	11 00 00 00 xx xx EF **Stop**

loop playback (1), during loop playback, normal operation and playback / Pause, previous song, next song, volume adjustment, including EQ **and so on. (2) After the loop playback starts, the chip will play the tracks in the device continuously, according to the stored physical order, after playing once, it will continue to play one side until it receives a command to stop or pause.**

3.5.9 Specify track index single track loop playback

0x08	
	The control command supports 0-65535 7E FF 06 08 00 00 01 xx xx
	EF **to play the** first **song** 7E FF 06 08 00 FF FF xx xx EF **to play the**
	65535th **song in a loop (1). Operation play/pause, previous song, next song,**

volume adjustment, including EQ, **etc. and the status is still loop playback. You can stop the command to close the loop playback status.**

3.5.10 Playing status query command

Command: 7E FF 06 42 00 00 00 EF

return command	**is playing** 7E FF 06 42 00	**meaning**
00 01 xx xx EF **is**	**playing pause playback** 7E FF 06 42 00 00 02 xx xx EF **is paused**	
during playback	**stop playback** 7E FF 06 42 00 00 03 xx xx EF **playback is completed (1), the chip**	
will have four states open to the user during the decoding process. The	**user can obtain the current**	

state of the chip through command query. (2) Play pause means that a song is being played, and an artificial instruction is sent to pause the play, and play stop means that the chip is in the state of playing stop after a song is played.

3.5.11 Play stop command

Stop playing 7E	FF 06 15 00 00 00 FE E6 EF **stop playing, return to**	background music and continue playing stop
playing 7E FF 06	16 00 00 00 FE E5 EF **stop software decoding**	

3.5.12 Specify folder to play in loop

Specify folder loop playback 7E	FF 06 17 00 00 02 FE E2 EF **specify** 02 **folder loop playback specified folder loop**	
playback 7E FF 06 17 00 00 01 FE E3 EF **specify** 01 **folder loop playback (1) ,** folder naming The mode must be "01" ---		

"99", **and cannot exceed 99. (2) After the specified folder is cycled, the voice of the folder will be played in a loop to guide sending a stop command.**

3.5.13 Randomly play device files

Random playback 7E FF 06 18 00 00 00 FE E3 EF **Random playback** of the entire device stops	
playback 7E FF 06 18 00 00 01 FE E3 EF **Stop random playback (1),** this command randomly plays	

the voice files stored in the device, according to The physical order is played randomly, regardless of whether

there are folders in the device. And the first audio file played must be the first audio file in the device.

3.5.14 Set the current track to loop playback

Set loop playback 7E FF 06 18 00 00 00 FE E3 EF **single loop playback on, cancel loop playback** 7E FF 06 18 00	
00 01 FE E3 EF **single loop playback off (1), send this command during playback, it** will Loops the current track.	

If the current process is suspended or stopped, the chip will not respond to this command. (2) If you want to close

the loop playing of a single track, just send the command to close it, and it will stop after the current track is played.

3.5.15 Turn on and off the mute function of the current song (mute)

command	7E FF 06 1A 00 00 00 FE E1 EF **Turn on sound**	
command	7E FF 06 1A 00 00 01 FE E0 EF **Mute on**	

3.5.16 Query the number of tracks in the current folder

instruction	7E FF 06 4E 00 00 00 FE AC EF **Query the total number of tracks in the current folder**

3.5.17 Query the total folder number of the current device

instruction	7E FF 06 4F 00 00 00 FE AB EF **Query the total number of current device folders**

3.5.18 Multi-folder insert function

Command 7E FF 06 25 00 01 01 FE D4 EF **"ADVERT1" folder, track "001" command** 7E FF 06 25 00 01 02 FE D3 EF	
"ADVERT1" folder, track "002" command 7E FF 06 25 00 02 01 FE D3 EF **Folder of "ADVERT2" with track "001"**

(1) There are up to 9 **folders , that is, from** ADVERT1---ADVERT9, the commands of the folders **must follow the rules we gave, otherwise it will cause errors. Note the folder naming format in the image above. (2) The maximum number of files in a single insertion folder cannot exceed** 255, which is "255xxx.MP3/WAV". **Please pay attention to the naming format of the file name in the above picture. (3) The relevant application of interpolation has been improved. If the currently playing file is in single loop or current folder loop, even if there is an interstitial, the current state will not be changed, and it will still be played in single loop or folder loop , unless the user uses a stop command or something else. (4) Please refer to 3.5.6 for the principle of interleaving.**

3.5.19 Specify file index and volume playback (only GD3300B supports this function)

Command 7E FF 06 22 00 1E 01 EF	**Set the volume to 30 (0x1E is 30) and play the first song**
Command 7E FF 06 22 00 0F 02 EF	**Set the volume to 15(0x0f is 15) and play the second song**

4. Reference circuit

For chip applications, we provide detailed design references. n Serial communication interface, the default baud rate is 9600, which can be modified according to customer requirements; n Interface circuit for external AD buttons; n Reference circuit for external mono power amplifier;

4.1 Serial interface
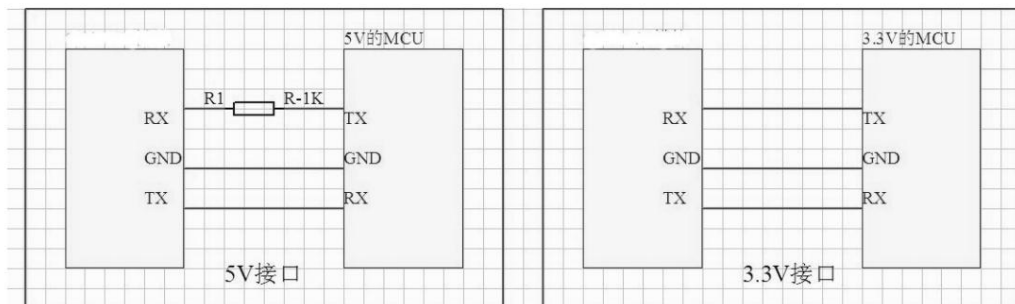

The serial port of the chip is 3.3V **TTL** level , **so the default interface level is 3.3V. If the system is 5V.** Then it is recommended to connect a 1K **resistor in series with the docking interface of the serial port . This is enough to meet the general requirements. If it is used in the occasion of strong electromagnetic interference, please refer to the instructions in "Precautions". The chip has been tested normally in both** 5V **and** 3.3V systems, and everything is normal. **All are using the direct connection method, and there is no** 1K **resistor in series.**

广州国电信息科技有限公司
Guangzhou GuoDian Information Technology Co., Ltd.　**GD3200B/GD3202B/GD3300B Datasheet**

4.2 external mono amplifier
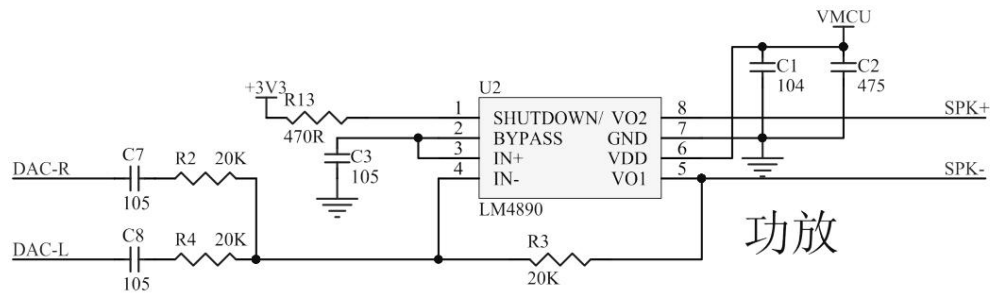

Here the LM4890 power amplifier is taken as an example, please refer to the datasheet of the IC for specific parameters. It is suitable for general low-power **players .** If you need more power, please find a suitable power amplifier by yourself.

4.3 External earphone circuit
Here R1 and R2 **are limiting resistors to prevent the external audio source from being too large (Vp-p maximum value is 3.0V), which will affect the stability of the system. C1 and C2 are DC blocking capacitors to prevent the DC level of the external audio source from affecting the inside of the chip. bias.**

6. **Precautions**

IO input characteristics							
Symbolic parameters		Minimum	Typical	Maximum	Unit	Test Conditions	
WILL	Low-Level Input Voltage **-0.3** 0.7V			**- 0.3*VDD**	V	VDD=3.3 IN	
HIV	High-Level Input Voltage	DD		**- VDD+0.3**	V	VDD=3.3 IN	
IO output characteristics							
Symbolic parameters		Minimum	Typical	Maximum	Unit	Test Conditions	
VOL	Low-Level Output Voltage	.	-	0.33	IN	VDD=3.3 IN	
VOH	High-Level Output Voltage	2.7	.	-	IN	VDD=3.3 IN	

1. The external interface of the chip is 3.3V **TTL** level, so in the design of **the hardware circuit, please pay attention to the level conversion problem. In addition, in an environment with strong interference, please pay attention to some protective measures for electromagnetic compatibility, GPIO adopts optocoupler isolation, increase** TVS, **etc.**

2. **The key values of ADKEY are set according to the general use environment. If it is under the environment of strong inductive or capacitive load, please pay attention to the power supply of the chip. It is recommended to use a separate isolated power supply, and in addition, add magnetic beads and inductance to the power supply. For filtering, it is necessary to ensure the stability and cleanness of the input power as much as possible. If it is not guaranteed, please contact us to reduce the number of buttons and redefine wider voltage distribution.**

3. For serial communication, in the general use environment, just pay attention to the level conversion. If there is a strong interference environment or long-distance RS485 **application, please pay attention to the isolation of the signal and design the communication circuit strictly according to the industrial standard. You can contact us, we provide design reference.**

7. Disclaimer

nDevelopment preliminaries

GD **series products will provide as comprehensive development templates, drivers and application documentation as possible for the convenience of users, but users are also required to be familiar with the hardware platform and related C language** knowledge **used in their own design products.**

n The mechanical structure

of EMI and EMC GD series chips determines that their EMI **performance must be different from the integrated circuit design.** The EMI of GD **series chips can meet most of the application occasions. If users have special requirements, they must negotiate with us in advance.**

The EMC performance of GD **series chips is closely related to the design of the user's base board, especially the power circuit, I/O isolation, and reset circuit. The user must fully consider the above factors when designing the base board. We will work hard to improve** the electromagnetic compatibility characteristics of GD **series chips, but we do not provide any guarantee for the** EMC performance of the user's final application product.

nThe right to modify documents

Guangzhou Guodian Technology Co., Ltd. reserves the right to modify the relevant documents of GD **series products at any time without prior notice.**

n ESD electrostatic discharge point

protection Some components of GD series products have built-in ESD protection circuits, but in the harsh environment, it is still recommended that users provide ESD protection measures **when designing the bottom board , especially the power supply and** IO **design, to ensure the stable operation of the product , such as wearing a reliably grounded static ring, touching water pipes connected to the earth, etc.**
